

Data + Analytics, Application Modernization

DATA-DRIVEN SAP SOLUTIONS FOR GLOBAL SUPPLY CHAINS

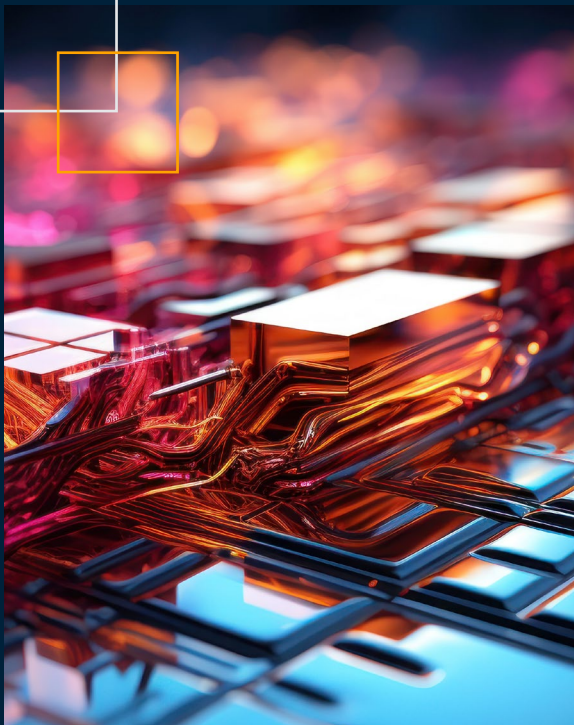

INTRODUCTION

A prominent professional services firm needed to optimize their global supply chain and strengthen data governance practices. The client faced challenges with inconsistent data and inefficiency, so they partnered with Aditi for a solution that would dramatically improve control, visibility, and business agility.

THE CHALLENGE

The client's global operations relied on disparate legacy systems that were plagued by issues such as inconsistent workflows, manual data entry, and limited visibility. These issues throughout the organization interfered with timely deliveries and increased operational costs.

The company also suffered from inaccurate and inconsistent data across systems that hampered decision-making, reporting, and compliance. These issues ultimately caused a lack of visibility and control because limited insights into real-time supply chain performance restricted strategic planning and operational agility.

OUR SOLUTION

Aditi Consulting adopted a comprehensive approach to solve these problems starting with project planning, requirement gathering and analysis, and solution design. A cross-functional team, including consultants, client supply-chain experts, IT staff, and SAP specialists, collaborated to define the project scope, goals, and a detailed implementation plan.

Through workshops and interviews, the team documented current processes, identified gaps, and gathered detailed requirements for a tailored SAP Supply Chain Management (SAP SCM) and SAP Master Data Governance (SAP MDG) solution.

The team then created a customized blueprint with workflows, data models, and integration points to optimize supply chain operations and align with the client's business objectives and industry best practices.

To implement the plan, Aditi experts configured the SAP modules, migrated data with robust cleansing and validation processes, developed custom reports and dashboards, and conducted comprehensive integration testing. To ensure user adoption, the Aditi team then created training materials, conducted user sessions, and implemented a change management plan.

A smooth go-live process minimized disruption and was followed by hypercare support, post-implementation reviews, and a continuous improvement plan based on user feedback.

THE RESULT

ENHANCED SUPPLY

Streamlined workflows reduced lead times and operational costs, leading to improved overall efficiency.

IMPROVED DATA

Consistent, high-quality data across the organization empowered better decision-making, regulatory compliance, and enhanced reporting capabilities.

INCREASED VISIBILITY

Real-time insights through custom reports and dashboards allowed for proactive strategic planning and operational control.

GREATER USER

The user-friendly interface and enhanced functionality of the SAP system resulted in positive user feedback and an improved user experience.

Data management and governance are core Aditi capabilities. You can partner with us to create a comprehensive technology plan, including business analysis, intelligence, and analytical frameworks. We can then convert this brainstorming exercise into an Agile program to deliver the milestones necessary for success. Connect with us today to explore how our tailored solutions can elevate your data environment.
